

Enneagram

Enigma Factsheet · Enneagram

The Enneagram is a personality model that classifies people into nine basic types. The underlying principle is not based on astrology, but Dutch researcher Sjoerd Visser has, using statistics, established correlations between the horoscope and the Enneagram.

The research of Sjoerd Visser

Sjoerd Visser analysed the horoscopes of 1,314 people whose Enneagram type was sufficiently clear. He then calculated the probability of a planet being in a particular sign or house. These values are multiplied together to arrive at a total score for each Enneagram type.

Variants

At the start of this experiment only a limited amount of data was available. It proved useful at that time to count the value of Pluto twice; this option is now mostly ignored.

The first version of the Enneagram theory dates from 2010. In 2012 Visser formulated an improved version.
