

Age Point

Enigma Factsheet · Age Point

The Age Point was introduced by Louise and Bruno Huber. This point moves through life from the ascendant at a speed of 6 years per house.

From birth

The Age Point begins its journey through the houses at the moment of birth. At the age of 6 the Age Point reaches the second house, after 12 years the third house, and so on.

After 72 years all houses have been passed and the first house comes around again.

Koch houses

The Age Point is used by default with Koch houses. Technically there is no problem if you want to use other houses, but then you are not working according to the Huber method.

Stepwise change

Like many other house systems, Koch houses are unequal in size. This means that the speed can change once the boundary of a house has been passed. This applies at least to Koch houses but also to other systems with unequal houses.

Interpretation

The Age Point symbolises the development of consciousness over time. There is a distinction between an active moment, just after a house cusp has been passed, and a more inward moment, just before a cusp.

Even when the cycle is repeated after 72 years, there is a more inward, reflective processing.
